MUSHROOM SPAWN

CULTURE.—Mushrooms are more easily cultivated than many people imagine and may be grown in any room or cellar where the temperature can be maintained at from 50 to 65 degrees. For the beds use a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when the loam may be added. Upon a dry firm bottom or shelf, make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue this, till the bed is twelve inches thick. Leave it thus for about a week, or until the temperature has subsided to 85 degrees. Then make holes about ten inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the compost about two inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days, fill the holes and cover the whole bed with two inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six or eight weeks from the time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at any time, it should be moistened freely with water at a temperature of 90 to 100 degrees.

Our stock of spawn is replaced a number of times during the season and is giving excellent results.

POTATOES

CULTURE.—So many conflicting opinions exist as to the best method of growing potatoes, that we do not venture to give directions for culture. We do, however, make the following suggestions: Plant in such a manner that most of the heavy hard work can be done by the horse. Use "Mapes Potato Manure," or "Quinnipiac Potato or Market Garden," in sufficient quantities to insure a crop. Always bear in mind that to get the full benefit of the fertilizer and not burn the roots it should be thoroughly mixed with the soil. If stable manure is used at all, it should not come in contact with the tubers, as it is sure to make the crop rough and scabby.

These Potatoes were raised from our Maine Grown Seed, the crop was uniform and heavy and of excellent quality.

POTATOES

Use the "Quinnipiac or Mapes Fertilizers." To insure quantity and quality in your potato crop there are positively no better fertilizers made.

Early Potatoes

The Potatoes we offer were grown and harvested in Maine especially for seed purposes.

At the time of going to press with this Catalog the Potato Market is so unsettled that we are unable to name prices, but we expect to have our supply as usual and will gladly quote on application.

Sixty Feet Long, Properly Thick, for Only $17.00

PROTECTION from wind, snow, dust and noise adds the culminating touch of restfulness to your property. Evergreens not only shut out wind, snow, dust and noise, but they hold the heat. They are of the greatest value around buildings, gardens, orchards and cultivated fields.

In making windbreaks it does not follow that they must be continuous from end to end of a field, but it is important that they shall run in certain directions. It is important that they shall be made up primarily of species of trees that will grow fast and in some cases tall. Both the Red Pine and Douglas Spruce grow rapidly. The pines will grow to a great height and the spruces, retaining their lower branches densely, will furnish the necessary protection for the under portion of the break.

15 Red Pine, . . twice-transplanted, 2 to 3 feet tall
AND
15 Douglas Spruce, twice-transplanted, 1½ to 2 feet tall
30 Trees for Only $17.00

EVERGREEN "SCREEN"
For Garage or Limited Service Area
$4.20 will Screen Twenty Feet

YOU don’t want to see your garage, stable or laundry yard every time you look out the rear windows. Something of nature’s carpentry is pleasanter to the eye. Why not screen off those service areas with a mass of living green, beautiful all the year round? An “Evergreen” planting is beautiful to look at, summer and winter. For ordinary screening, plant the trees about five feet apart, a few feet from the building, not in rows but in an irregular, natural-looking group, about two rows thick.

12 Arborvitae, . . once-transplanted, 1½ to 2 feet tall, for only $4.20
OR
10 Hemlock, three-times transplanted, 2 to 3 feet tall, for only $9.00

SWEET PEAS

Our list of Sweet Peas has been carefully revised with a view of keeping it strictly up to date. Should you miss some old favorite in the list, it has been discarded in favor of an improved sort. White seeded varieties should not be sown until the ground is comparatively dry and warm. If sown under wet and cold conditions the seed may rot in the ground. With few exceptions Sweet Peas are black seeded and do not appear to be affected like the white seeded sorts.
